

What is claimed is:

1. A snare gate for a snare drum, comprising:  
a horizontal plate; and  
a pair of legs for supporting the horizontal plate, wherein the legs are fixed to prescribed positions of a hoop, which is fixed to circumferential ends of an opening of a hollow cylinder of the snare drum, and wherein side edges of the legs are respectively bent inwardly to form ribs, each roughly having an L-shape in cross section, thus reinforcing the legs.
2. A snare gate for a snare drum, comprising:  
a horizontal plate; and  
a pair of legs, each of which is made of a flat plate and fixed to a hoop, wherein each of the legs has a rib that is integrally formed at a center portion thereof.
3. The snare gate for a snare drum according to claim 2, wherein a rib is integrally formed on the horizontal plate.
4. A snare gate for a snare drum, comprising:  
a pair of legs attached to a hoop which is fixed to an opening of a hollow cylinder of the snare drum;  
a horizontal plate, which connects together both of the legs and which is arranged perpendicular to each of the legs; and  
a rib which is formed on each of the legs and which is arranged perpendicular to both of the legs and the horizontal plate.
